### 3073 BURPEEANA GIANT ZINNIAS

(Pictured in Color on the Front Cover)

Burpeeana Giant Zinnias are the most beautiful of any yet developed, combining huge size, lovely form and magnificent colors. The breath-taking flowers are informally ruffled and gracefully quilled giving the flowers refinement and charm. An important virtue is the medium-tall habit of the plants which grow only 2 ft. tall, making them most desirable for beds and borders. The 6 in. flowers come in all zinnia colors including glistening white, soft yellow, glowing gold, lively orange, bright pink, rose and salmon tones, vibrant red, soft violet, rich purple, and combinations of these colors. These shades can be a joy in arrangements as well as in the garden, for stems are long and strong.

### 3243 GLORIOSA DOUBLE DAISIES

(Pictured in Color on the Inside Front Cover)

Gloriosa Double Daisies, this year's All-America Silver Medal Winner, are an entirely new kind of flower. The big round, golden yellow double flowers resemble chrysanthemums. Some of them are semi-double with dark centers like Black-Eyed Susans from which they were developed. The 3 ft. plants are loaded with blooms, making them spectacular in the garden. With very long, strong stems they are excellent as cut flowers. Seed can be started indoors or early outdoors for blooming during midsummer and fall. Gloriosa Double Daisies are very easy to grow and stand both extreme heat and cold. They will live through the winter and make a stand of magnificent bloom again next year.

Pkt. 50¢; 1/32 oz. \$1.50; 1/16 oz. \$2.50

Part of the "Workshop" at Burpee's Floradale Seed Farms where new and improved flowers are developed. Here selected plants are caged to protect them from insect pollination so seed obtained will produce plants having the same virtues for which they were selected. This is but one step in the development of a new flower which may take decades to accomplish.

## Burpee's Almost WHITE American Marigolds

### \$10,000 for a Pure White Marigold

We have been getting marigolds nearer and nearer to white, but we are still looking for a pure white marigold.

Burpee renews its offer to pay you \$10,000 if you are the first person who sends us seeds that grow the first pure "white marigold" 2½ inches across and as white as Snowstorm Petunia. It must be understood that you will not give or sell "white marigold" seeds to anyone else; that all seeds sent to us become the property of W. Atlee Burpee Co. with the exclusive rights to name, introduce and sell, and no seeds can be returned.

If you find a pure white marigold let the flowers go to seed and send, before January 1, 1962, about 100 seeds to us at our address nearest to you.

We will plant the marigold seeds on our Floradale Seed Farms and the results will be judged by the President of W. Atlee Burpee Co. and two other distinguished horticulturists. The decision of the majority of judges will be final and results announced in our seed catalogs.

In this world-wide search for a pure white marigold, anyone, anywhere, may submit seeds, except Burpee employees or their families. It is understood that all seeds sent to us for trial are accepted by us only under the above conditions.

Please do not send us any seed unless it comes from a marigold that is pure white.

Fredrick, 158 North Delphine Ave., Waynesboro, Va.; Mrs. B. L. Pollack, 116 Clover Rd., Route 13, State College, Pa. Mrs. G. G. Ehrhart, 233 Frederick St., Hanover, Pa.

## AMERICAN MARIGOLDS

*Also Known as Friendship Flowers*

When Cortez conquered Mexico he found Marigolds growing in the gardens there. Marigolds are native to southwestern United States and Mexico.

Cortez took seed to Europe and they rapidly became the favorite flower for the devout to place at the altar of the Virgin Mary. This is how they got the name, "Mary's Gold", and then "Marigold." The big ones (*Tagetes erecta*) used to be called African Marigolds, but now we call them American, which they are. The little one (*Tagetes patula*) are called French Marigolds, although they also are natives of the American continent and nowhere else in the world.

Our president, David Burpee, has suggested that Congress adopt the American Marigold as our National Floral Emblem. The United States is the only great country in the world that does not have a National Flower. Others have suggested the Rose, Carnation, Corn Tassel and Grass. But for hundreds of years the Rose has been the floral emblem of England, and it is the floral emblem of eight other countries, four of which have fallen behind the Iron Curtain since selecting the Rose as their emblem. The Carnation is the national floral emblem of Spain. The Corn Tassel is not a perfect flower and is not grown especially for its beauty. As for grass, who would want to walk on the National Floral Emblem?

The American Marigold has much in its favor—it is easy to grow from seed and does well in every state of the Union, even as far north as Alaska and in the tropical clime of Hawaii. The Marigold can be an ambassador of good will for the United States to every civilized country in the world for it is popular in all of them. It is called by some "Flower of Good Luck" or "The Friendship Flower."

## General Listing of Annual Flowers

Annuals, because they bloom the same year from seed planted in the spring, offer the quickest and most profuse color to glorify a garden, and actually take the least care of any kind of flowers to grow to perfection.

The best in annual flowers are offered on pages 2 to 43. Burpee Giant Zinnias, new for 1961, are shown in color on the front cover. Gloriosa Double Daisy on the inside front cover is a perennial but plants will flower the first year if seed is sown early; thus it may be treated as an annual. On the inside back cover are pictured in color 7 new and Better Annual Flowers of recent years.

Of the easiest culture, succeeding in ordinary, well-drained soil and, where summers are not too hot, plants will bloom from early summer until frost and furnish an endless supply of long-lasting cut flowers. Sow seed in early spring. In hot sections, another sowing may be made in early summer to furnish blooms in the cool fall days. Plants grow 15 to 24 in. tall, depending on the variety used and the locality in which it is grown.

## DAHLIAS From Seed

It is easy and fascinating to grow dahlias from seed and enjoy the surprise of new colors and forms. Seeds of the tall dahlias should be started early indoors; the seed of the dwarf varieties may be sown in the open when the soil has become warm. Dwarf growing varieties reproduce fairly true to color and type, but the tall kinds can be expected to produce some singles and semi-doubles as well as full double blooms. It is from seed that you get new dahlias, and you are just as likely to obtain them as anyone else. Tubers may be stored for use the next year.

Pansies always have been a great specialty with us and we are justly proud of our strains. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular. Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back to produce new growth and flowers in early fall. Seeds may be sown outdoors when soil has become warm; for earlier blooms, start seed indoors or in a hotbed four to six weeks before your usual outdoor planting time.

## Burpee's Tetra Snapdragons

### Giant Ruffled Tetraploid Snapdragons

Tetra snaps are a Burpee scientific creation, originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. Genetically, they are known as tetraploids, for, when examined under the microscope, they have twice the number of chromosomes in their cells as the regular or diploid snapdragons.

Burpee's Giant Tetra Snapdragons are extremely large and attractively ruffled. Plants are exceptionally strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite heavy. Under general field conditions the central spikes grow 2 ft. and more in height; these are surrounded by lateral spikes of lesser height. Tetra Snaps are wonderful for cutting.

## SNAPDRAGONS

These exquisite flowers have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding best in rich or moderately rich soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seed outdoors when soil has become quite warm; for earlier blooms sow the seed indoors six weeks before your regular outdoor planting time, and transplant the seedlings when the soil has become warm.

# Giant Dahlia Flowered Zinnias

Dahlia flowered zinnias are outstanding both for the exquisite form of their long-stemmed flowers, which resemble giant dahlias, and for the lovely shades included in their range of color. They grow about 5 in. across and 2 in. and more in depth. The well-branched sturdy plants grow 3 ft. high and bloom most profusely over a long period. Showy in the garden; wonderful for cutting as flowers have remarkable keeping qualities. Giant Dahlia Flowered Zinnias are an old favorite for beds and wide borders.

**4295 Canary Bird** A most pleasing shade of primrose-yellow which combines well with the deep lavender shade of Dream or Royal Purple.

**3555 Dream** An unusual tone of deep lavender turning to mallow-purple as the flowers age. This rather rare shade in zinnias is sure to attract attention in the garden as well as in arrangements.

**4316 Exquisite** Light rose with deeper rose center, creating a most pleasing two-toned color effect which is lovely for cutting.

**4337 Oriole** Attractive two-toned flowers—golden orange outer petals in contrast to a reddish orange center. Pretty blending.

**4321 Polar Bear** Best of all white zinnias; flowers are borne on long stems. Nice alone and exceptionally good mixed with others.

**4311 Royal Purple** Distinct color in this class—a deep, rich royal purple without any hint of blue. All-America Winner.

**4328 Salmon King** Strikingly beautiful, large and rounded flowers of a lovely salmon-rose. Its excellent color, strong stems, and profuse blooms are most desirable for garden and cutting.

**4322 Will Rogers** Loveliest and most brilliant scarlet-red which glistens in the sun with dazzling beauty. This vibrant color is perfect for bold accent. Flowers grow larger than other dahlia flowered zinnias, fully double and are borne profusely on long stems. Makes a grand showing in the garden; wonderful for cutting.

**4324 All Colors Mixed** Well-balanced mixture of every color known in giant dahlia flowered zinnias that have been blended for a glorious garden display; for cutting you will have quantities of long-stemmed giant flowers, the petals of which are slightly cupped and overlay one another in regular manner. ## Giants of California Zinnias

Immense double flowers, 5 to 6 in. across, of a distinctive shape that is most graceful and desirable. The overlapping petals are more loosely placed than in the dahlia flowered type of zinnia, and the flowers themselves are more flattened, being only about 1 in. in depth. Plants are vigorous, well-branched, grow about 3 ft. tall and produce many long, strong stems each crowned with a flower.

**3523 Enchantress** Two-toned light rose with dark rose center.

**3556 Golden Queen** Soft lemon-yellow suffused golden yellow.

**3502 Lavender Gem** Deep lavender, turning to warm purple.

## STRAWFLOWERS AND OTHER EVERLASTINGS

With the exception of Job's Tears, *Briza maxima* grass and Honesty, the varieties listed on this page are desirable for use as fresh cut flowers, and largely grown to dry for winter bouquets. Job's Tears is an annual grass grown for its grayish white seeds which are strung as beads. *Briza maxima* holds its panicles when dried and may be used alone or with dried flowers. Gourd fruits, when dried, are used for ornaments. Honesty is prized for its satiny, parchment-like partitions of the dried seed pods. The best method to dry the flowers and *Briza maxima* grass is to cut the material before it is fully developed, remove foliage, bunch loosely, and hang head downward in a cool, airy, shady place. The flowers of Bells of Ireland, page 10, and Celosia (Cockscomb), page 13, also last a long time if dried as you would everlastings. Flowers should be fresh and free from water. Dry them slowly and never over artificial heat.

# BURPEE PERENNIAL FLOWER SEEDS

Perennial flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Seeds sown early make stronger plants to go through the winter and give more bloom the next season. Cultural directions are on every packet. Also included are biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

# BURPEE'S Famous Vegetable Seeds

**GROW YOUR OWN VEGETABLES** The vegetables you grow, if used when they are in prime condition, will be fresher, taste better and contain more vitamins and minerals than those usually bought at the store. To enjoy the flavor of vegetables at their very best, they should be cooked as soon as possible after being picked. Many of today's best vegetables were first introduced by Burpee.

Vegetable Seeds and Roots are Sent Prepaid anywhere in the U. S.

## Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

## Follow the Bull's Eye O

We have used this mark, O, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. We have reprinted an old woodcut which appeared in early Burpee Seed catalogs, the forerunner of our present symbol. This mark, O, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted on which varieties to choose for your section, we suggest you select those marked with the bull's eye.

Extensively grown for use as dry beans

Red Kidney and White Marrowfat are grown mostly as dried beans for winter use; Dwarf Horticultural for green shelled beans, although pods may be used, when young, as snap beans. Culture is similar to that used for bush beans, but shell beans should be left on the plants until the pods are matured. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many pole beans listed on page 55, are also desirable as shell beans.

Bansei Edible Soy Bean

## THE EFFECT OF SEASON, LOCALITY, WEATHER, CLIMATE AND SOIL

Throughout the vegetable section of this catalog, we have given the approximate maturity dates and other comparative information about varieties, such as their size, shape, etc. It should be understood that weather conditions, climate, soil, locality and time of sowing may affect any or all of these characteristics. The approximate maturity dates given will show the relative time when different varieties may be expected to be ready to use.

## VEGETABLE OR EDIBLE SOY BEAN, BUSH

The plants are erect, bush-like and literally loaded with pods, each containing 2 or 3 oval-shaped bright green beans which are delicious cooked as green shelled beans. When fully matured, the dried beans are nearly round, yellow and may be cooked similarly to lima beans. Suitable for quick freezing; extensively used for canning. A pkt. will plant 25 ft. of row; 1 lb. will plant 150 ft.

Pkt. 20¢; ½ lb. 50¢; 1 lb. 85¢; 2 lbs. \$1.60; 5 lbs. \$3.50

# Climbing or POLE BEANS

Young pods make delicious snap-shorts; also popular as green or dried shell beans. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type.

Pole beans come into bearing later than bush beans, yield more heavily over a longer period and some produce bigger pods. They do best if the vines, which grow 5 to 8 ft. and more high, are given support, the most frequently used being rough poles, although they may be planted 3 to 5 in. apart along a trellis or fence or along a series of strings on which they may be trained.

A pkt. of seed is enough for 15 poles; one lb. for 100 poles or 300 ft. of fence, trellis or string.

## 6232 Burpee Golden —Best flavored of all beans

60 days. Tender, stringless, fiberless, meaty and of the most delicious flavor at all stages of growth. Pods are wide, flat, butter-yellow, 5½ to 6½ in. long, 1 in. across, and may be sliced lengthwise for cooking. Plants start out to grow like a bush bean and set their pods very early, quite close to the ground; then the runners shoot up and continue to produce tender pods of outstanding quality over a long period.

Pkt. 25¢; ½ lb. 80¢; lb. \$1.50; 2 lbs. \$2.50; 5 lbs. \$5.00

## 6182 Kentucky Wonder —Most widely grown green pod pole bean

It is early, climbs well, and bears a heavy crop of large, green pods, 7 to 9 in. long, in clusters. They are round, thick, meaty, tender, brittle, excellent for quick freezing, fairly straight and stringless when young. Though thick, the pods appear slender.

A pkt. of seed will plant 10 poles; 1 lb., 50 poles. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. of seed to about 50 ft. of row; a pkt. will plant 10 ft.

Beets are delicious when roots are half grown, or they may be used from them on until they reach full size. Tops are excellent when cooked as "greens." A pkt. of seed will sow 25 ft. of row; one oz. 100 ft.

### Cabbage

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish red (Mammoth Red Rock); some, the round heads (Copenhagen Market); others, the Pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the midseason and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing.

A pkt. of seed will produce about 125 plants; oz. about 3000 plants. Days to maturity represent the average time required from setting the plants in the garden until cabbage is ready to use.

## CAULIFLOWER

Use cauliflower as soon as heads fill out, otherwise they will lose in quality and break. Uncooked cauliflower is delicious, when head is broken up into small pieces, chilled and used as a relish with mayonnaise. Cooked cauliflower is a most delectable dish. Cauliflower is best grown as a fall crop in the greater part of the U.S.A. A pkt. of seed will produce about 150 plants; 1 oz. 4000. Days to maturity given in descriptions are from the time the plants are set out in the garden. These are average and will vary somewhat in different seasons and sections.

## O Follow the Bull's Eye O

We have used this mark, O, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. This mark, O, usually called a bull's eye, indicates the varieties which we consider the best of their class and which do well in most all sections.

**Carrots** may be used at different stages of growth but are at their best if eaten when half grown or smaller. There are many ways to use carrots—cook alone, use in soups, stews, chowders, with other vegetables or with roasts. Raw carrots may be served as a relish when chilled and cut lengthwise in slender strips; splendid when shredded in salads. Make a refreshing juice.

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing. Cover the seed with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 2 to 3 in. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall for all uses.

There are varied sizes and shapes of carrots to suit your purposes and soil; Burpee's Oxheart with its stocky, heart-shaped roots especially suited for shallow or heavy soil to Imperator for deep mellow soils—the popular medium length carrot for all general purposes is Goldinhart. A pkt. of seed will sow about 30 ft. of row; an oz. of seed will sow about 200 ft.

Their shape makes them easy to harvest and they do well in shallow or heavy soils where longer carrots, which require deep, mellow soil, often fail to develop properly. The broad, stocky, heart-shaped roots of Burpee's Oxheart will grow 4 to 4½ in. long and 3 to 3½ in. across where they are thickest.

### Cantaloupes

To really enjoy a cantaloupe, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. A pkt. of seed (except Burpee Hybrid) will plant 12 groups, 1 oz. 120 groups or so-called "hills."

### CUCUMBERS

Cucumbers may be harvested at almost any age depending on the purpose for which the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the pickling types and gherkins for relishes or pickles.

Cucumbers, sliced unpeeled, make for a more attractive salad and it has been said that if you eat them with the skin on you may not be troubled with that after taste which some persons experience.

A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in a row; later thin the plants to stand 12 in. apart in a row.

## EGGPLANT

## Greenleaf Vegetables For Winter Use

"Greens" and salads are highly beneficial to health as they are good sources of minerals and are also rich in vitamins. They are easily grown, very palatable, and may be had in a wide range of flavors from the piquant tang of endive to the mild taste of lettuce. Combinations of "greens" and salads are highly desirable and pleasing.

"Greens" grow best during the cool seasons of the year. In addition to spring plantings, you should plan to sow again in mid- or late summer for fall use or later where winters are not too severe.

While you are planning your seed order it is a good idea to order sufficient packets to make later plantings that will provide you with tasty, healthy "greens" next fall.

**Lettuce**, the brittle, tender leaves of the crisp and looseleaf types; **Endive**, the refreshing flavor of the curled or the tangy taste of the Batavian Escarole; these are the universal favorites. Then, there is **Chinese Cabbage** with its delicate celery-lettuce flavor, and for many weeks after frost you can use the regular Cabbage. Others include **Broccoli**, with its rich green, sprouting heads; **Brussels Sprouts**, whose flavor seems to improve after a light frost as does **Kale**; **Chives**, with its mild onion-like flavor; **Bunching Onions** for green scallions; **Leeks**, sweet flavored, thick stems; **Collards**, good boiling green with cabbage-like flavor; **Corn Salad**, well known Lamb's Lettuce; **Mustard Greens**, splendid for salad or cooked like spinach; **Parsley**, a "must" in every garden, for garnishing or dried for use as flavoring; **Spinach**, frosty nights improve the color; **Swiss Chard**, popular for boiling greens as is **Spinach Beet**; **Turnip Greens**, use the Foliage variety, leaves have a mild flavor when cooked like spinach.

### Sizes and Weights of Tomatoes

given in our descriptions are for the general field-run of fruits. Customers often write us that they have produced tomatoes bigger than we state they will grow. This is not surprising for with special care, proper fertilizing, watering, pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables.

Tomatoes belong in every garden—they are easily grown and produce quantities of fruit for the space occupied. Picked when sun ripened, they have a flavor unequalled by any you may buy. As they can be served in so many different ways, one never seems to tire of them.

A pkt. of standard tomato seeds will produce about 100 plants; one oz. 5000 to 6000.

The meat of large pink tomatoes is fleshy and contains few seeds.

# Burpee's HYBRID TOMATOES, continued

Burpee's Sunnybrook F<sub>2</sub> Tomato—heavy quality yielder

## HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and have the ability to outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes can produce larger plants and higher yields they must be fed more than standard tomatoes. Tests have shown that hybrid tomato seedlings started in 4 in. pots or 4 x 4 in. bands produced earlier and heavier yields than those started in 2 1/2 in. pots or 2 x 2 in. bands when transplanted to the garden. To produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of transplanting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom. Water during dry spells.

Each seed of an F<sub>1</sub> Hybrid Tomato and other F<sub>1</sub> hybrid vegetables is produced by carefully controlled crossing by hand of two distinct parent lines. This requires a great deal of work and entails a heavy expense but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with bigger yields and better quality. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the crop.

The sweet fleshed peppers are desirable for slicing, salad and stuffing; they come in different forms—some blocky (Burpee's Fordhook), some heart-shaped (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). All are green at first changing to red when ripe, except Oshkosh, which turns to bright yellow.

Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling.

A pkt. of seed will produce about 50 plants; 1 oz. 1500. Days mentioned in descriptions represent average time required from setting of plants in the garden until the first fruits are ready.

## EDIBLE-PODDED or SUGAR PEAS

THE PODS ARE COOKED AND EATEN LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle, succulent and free of fiber or parchment. Should pods develop too fast for use as snap beans, seeds may be eaten as shelled peas and are of the best flavor before they have reached full size.

# PARSNIPS

Tender and delicious late in the fall especially after a frost which adds sweetness to the flavor. A favorite way to serve parsnips is to parboil them, turn gently in brown sugar and butter so as to glaze them to an appetizing reddish gold and to serve them alone or with broiled ham. Roots may be stored for winter use, or some may be left in the ground and dug whenever you can get into the soil during the winter or early the following spring. Roots are not injured by freezing and the cold does improve the flavor. A pkt. of seed will sow about 20 ft. of row; an oz. 200 ft.

**5284 All American O** 95 days. Flesh is white, with small core and tender, fine flavor. Roots are smooth, slender, almost white, of medium length, broad shoulder and free from side rootlets.

# SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tampala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season. They may be canned or frozen for winter use.

The number of days from the sowing of seed until spinach is ready to use applies to spring plantings in vicinity of Philadelphia; this varies in different sections and season when sown. A pkt. of true spinach seed will sow 25 ft. of row; 1 oz. 75 ft.

# RHUBARB

*Victoria Rhubarb*

The succulent stems of rhubarb make an appetizing dessert, either stewed or in pies. Never use rhubarb leaves for food purposes. Red-stalked rhubarbs are sweeter and make a sauce that is more beautiful and more delicious than the usual commercial rhubarb. All varieties are prized for canning as well as freezing. In gathering rhubarb stalks, select the larger ones growing on the outside of plant, grasp them firmly near the base and with a slight sideways twist, pull them from the crown.

## 5308 Victoria Rhubarb from SEED

Stalks are broad, thick, tender, green shaded with red and of a pleasing tart flavor. Heavy yielder, strong, upright grower and reliably hardy. From seed sown this spring, usable stalks will be ready two years hence; for quicker results plant roots. A pkt. of seed will sow 10 ft. of row; oz. 75 ft. of row.

## TAMPALA OR FORDHOOK SPINACH

5341 Valuable "green" that stands hot weather. Within 6 to 8 weeks from sowing Fordhook Spinach is ready to use when entire plants make the most delicious "greens" either raw as a salad or cooked like spinach. The young leaves are so tender they require only a few minutes to cook; stems may be cooked like asparagus, their flavor like artichokes.

As a cooked, canned or quickly frozen "green," Fordhook Spinach is, in the opinion of many, superior to regular spinach or Swiss Chard—more appetizing color, more delicious flavor, shrinks very little, holds its dark green color better and is easier to prepare for use fresh or frozen.

Pkt. 25¢; 1/4 oz. \$1.00; oz. \$3.00

*Burpee White—Outstanding for flavor*

## **Earliest RADISHES**

### **6096 Burpee White**

*Remains crisp and non-pithy for a long time*

25 days. Exceptional tenderness, mild flavor, crispness, and remaining long in edible condition, are most outstanding qualities of Burpee White Radish. When young, roots are nearly round, juicy and sweet with pure white skin and flesh. They become flattened in shape as they grow, the diameter increasing with age. Burpee White Radishes are at their best eating stage when  $\frac{3}{4}$  to 1 in. across. Grown from spring-sown seed, they are crisp, solid, mild and tender.

Pkt. 25¢; oz. 60¢;  $\frac{1}{4}$  lb. \$1.65

### **6086 Burpee's Earliest Scarlet Button**

25 days. Earliness, bright scarlet color, unusually brittle and delicious quality, mild, delicate flavor, make it a most desirable round radish. Grows about 1 in. in diameter. Thin, tender skin; flesh, icy white, crisp and juicy. Fine home garden variety.

Retain their good eating qualities for a long time. They have attractive color, ideal shape, extra-maturity, slender tap-roots and short tops.

Pkt. 25¢; oz. 55¢;  $\frac{1}{4}$  lb. \$1.65;  $\frac{1}{2}$  lb. \$2.50

*Cherry Belle Radish—One of the most desirable*

**Radishes** do best in loose, deeply prepared soil and when growth is quick and steady. Sow seed of the earliest and mid-season varieties as early in the spring as soil can be worked. Make additional plantings when the first planting is up and well started. Sow until early summer, then a month before frost. Length of tops, color of roots may vary with soil and growing conditions; shape of roots may also vary with soil, depth of planting and time of sowing. A pkt. of seed will sow about 20 ft. of row; 1 oz., 100 ft. When sowing beets, carrots, parsley and parsnips, mix in a few radish seeds to mark the rows where the slower-growing vegetables were sown. As the radishes are harvested it will tend to thin out the other crop.

### **6087 Burpee's Rapid Red** —*Early*

23 days. Small, bright red radishes round as marbles,  $\frac{3}{4}$  in. in diameter, with pure white, crisp and delightfully snappy flesh. Early, of fine quality, smooth and attractive in appearance. A fine table radish.

Skin is an attractive bright scarlet-red. Flesh is pure white and has a most delicious flavor from the time roots are  $\frac{1}{2}$  in. across to full size.

Pkt. 25¢; oz. 60¢;  $\frac{1}{4}$  lb. \$1.65;  $\frac{1}{2}$  lb. \$2.50

### **6252 Champion** —*Well named*

28 days. *All-America Bronze Medal Winner*. Round or ball shaped, with a slender taproot. Clear, bright scarlet skin. The white flesh remains crisp and delicious without becoming pithy even when the roots reach the diameter of a silver dollar. As with all large radishes, sow seed thinly and thin seedlings to stand 1 to 2 in. apart so as to permit full development of roots.

Pkt. 25¢; oz. 55¢;  $\frac{1}{4}$  lb. \$1.65;  $\frac{1}{2}$  lb. \$2.50

### **5043 Crimson Giant** —*Globe shaped*

The shape is a perfect globe,  $1\frac{1}{2}$  in. in diameter, with thin, tender skin of deep crimson and solid white flesh which is firm, crisp and mild in flavor. For the biggest radishes, sow seed thinly and then thin the plants to stand about 1 to 2 in. apart in the rows.

Pkt. 20¢; oz. 45¢;  $\frac{1}{4}$  lb. \$1.15;  $\frac{1}{2}$  lb. \$1.95

The flesh is white, firm and crisp; juicy, mildly pungent and tender. Tops are very short; radishes show partly above ground which makes them easy to harvest. For best eating, use young roots.

Pkt. 20¢; oz. 45¢;  $\frac{1}{4}$  lb. \$1.15;  $\frac{1}{2}$  lb. \$1.95

### **5047 Vick's Scarlet Globe** —*Forcing type*

## RADISHES

White Icicle Radish

## Midseason or Summer RADISH

5304 White Strassburg 40 days. Become ready to use when the others are gone. Roots are 4½ to 5 in. long and 2 in. in diameter at the shoulder, tapering gradually toward the small tap-root. Skin is white and thin; flesh is mildly pungent, white, crisp, tender and of an icy texture. As they grow more slowly, they endure heat better and are valuable for summer use. Remain long in good edible condition. Prefer a moderately light soil. We suggest a deep and thorough preparation of the soil to obtain the best roots.

Pkt. 20¢; oz. 45¢;  $\frac{1}{4}$  lb. \$1.15;  $\frac{1}{2}$  lb. \$1.95

## Fall and Winter RADISHES

These require cool weather at the finish of their growing season. Sow seed in early summer for fall use; in midsummer for late fall and winter. By storing roots in moist sand in the cellar, fresh, crisp radishes may be had during the early winter. We offer 2 best kinds. Give the plants plenty of room by thinning out when young to stand 3 in. apart.

If your garden includes some of each of the three different classes of radishes—earliest, summer and winter varieties—it will keep you supplied with this refreshing vegetable practically all year 'round. You have your choice of many kinds.

## Fall and Winter SQUASH

The fall and winter squashes produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F. A pkt. of seed will plant 6 to 8 groups, an oz. 20 to 30 groups or "hills."

6115 Butternut  85 days. Exceptionally meaty. Fruits are 10 to 12 in. long and 4 to 5 in. across; bottle shaped, smooth, dark buff colored skin and a hard shell. The flesh is orange, dry, fine textured, and of a sweet nutty flavor. Good keeper. Vines are quite resistant to squash borer as stems are so tough as to normally prevent the female from inserting her eggs.

Pkt. 25¢; oz. 75¢;  $\frac{1}{4}$  lb. \$2.25

6107 Buttercup 105 days. Turban-shaped fruits 4½ in. thick and 6½ in. across; weigh 4 to 5 lbs., blossom end marked with a prominent "button." ◀ Early Golden

Burpee Hybrid Zucchini

## Summer SQUASH

In descriptions we give the average size of fruits when fully grown. For the best eating, summer squashes are used while very young and tender; in fact, Early White is delicious if cooked whole when very tiny—an inch or more across. Generally speaking, a summer squash is too old for good eating when the thumb nail does not readily pierce the skin without pressure. Varieties of bush-like growth take up much less space in the garden than the running kinds and are especially adaptable for the small garden; Cocozelle and Zucchini are very popular bush types. A pt. of seed will plant 8 to 10 groups; an oz. 30 to 40 groups or so-called "hills."

# WATERMELONS

**Watermelons**—your choice of round, oval, or long. If you live in the North, plant the quickest maturing varieties (New Hampshire Midget or Burpee's Fordhook F<sub>1</sub> Hybrid). A pkt. of seed (except F<sub>1</sub> Hybrid Seedless) will plant 6 groups or "hills"; 1 oz. about 30 groups.

# Burpee's Lawn Grass Seed

SHIPPED PREPAID ANYWHERE IN THE U. S.

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. Why not plan now to have a luxuriant lawn that will add to the beauty of your home?

The Burpee leaflet, "GN 43 Construction and Maintenance of the Lawn," will be sent free upon your request. For new lawns, sow 1 lb. of grass seed to 200 sq. ft. of space; use 100 to 150 lbs. per acre. 1 lb. MERION Kentucky Bluegrass is enough for 500 to 750 sq. ft. To improve old lawns, use half of these quantities.

This beautiful lawn on Burpee's Fordhook Farms was produced from Burpee's Fordhook Finest Lawn Grass Seed

## Enchantment Lily

# Hardy Garden Lily Bulbs

Hardy lilies are easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture. Gloriosa Lily, which is perennial only in frost-free localities, may be grown in pots.

**7242 Regal, Extra Large Bulbs** Will produce more flowers per plant and taller spikes the first year than the large bulbs will provide. 60¢ each; 3 for \$1.65; 6 for \$3.10; 12 for \$5.75; 25 for \$11.00

**7249 Regal, Large Bulbs** Shorter spikes with fewer flowers than the above—the size preferred by many for the largest number of flower spikes at low cost. At these low prices, a splendid opportunity is afforded you to plant this beautiful hardy garden lily in quantity. Plants from these bulbs will become more floriferous with age.

4 for \$1.00; 12 for \$2.75; 100 for \$20.00

**7251 Regale album** Same habit of growth as Regal; the flowers, however, are pure white. They are just as easy to grow, perfectly hardy, established plants having as many as 25 blooms to a stem. Flowers are large, funnel-shaped, and heavily scented. Bloom in July and grow 3 to 5 ft. tall. 60¢ each; 3 for \$1.65; 6 for \$3.10; 12 for \$5.75; 25 for \$11.00

**7262 Bellingham hybrids** A strain of hardy lilies, ranging in color from clear yellow through yellow-orange to bright orange-red with scarlet tipped petals, the majority intensely spotted with brown or reddish brown. We can supply mixed colors only. About 5 ft. tall bearing up to 20 daily colored, long lasting, recurved flowers in June and July. Likes partial shade. 60¢ each; 3 for \$1.65; 6 for \$3.10; 12 for \$5.75; 25 for \$11.00

Plant Patent 862.) 60¢ each; 3 for \$1.65; 6 for \$3.10; 12 for \$5.75; 25 for \$11.00

**7248 Orange Triumph** Erect, large, broad-petaled, cup-shaped light pinkish orange flowers faintly spotted maroon and produced in clusters of 7 or 8 atop strong 4 ft. plants in July and August. It is of the easiest culture in any ordinary garden soil, light or heavy. An extremely hardy variety. 50¢ each; 3 for \$1.35; 6 for \$2.60; 12 for \$5.00; 25 for \$8.75

*Orange Triumph Lily (umbellatum type)*

## 7261 Gloriosa Lily (*Rothschildiana*)

A most unusual and fascinating garden lily in that it will climb if it has something nearby to which it may attach itself. Leaves are elongated, soft green with curling tendrils on the tips with which they cling to a fence, trellis, string or wire.

Gloriosa Lily is most exotic in color and shape. The petals are sharply recurved, brilliant red bordered golden yellow—a striking bicolor contrast, the red becoming darker as flowers age. Planted in full sun, the colorings are more brilliant but plants become stockier, shorter and the stems of less length. Blooms have remarkable keeping qualities so make wonderful cut flowers. They also make attractive pot plants.

Roots are entirely unlike any of the other lilies—they do not have scales but are somewhat like a small dahlia tuber, 4 to 6 in. long and a trifle thicker than a lead pencil. Plant in a horizontal position, 4 to 5 in. deep in full sun or semi-shade. They do best in a sandy soil, preferably on the acid side; it is essential that any soil in which tubers are planted be well drained. Not hardy except in frost-free sections.

\$1.25 each; 3 for \$3.50; 6 for \$6.50; 12 for \$12.50

75¢ each; 3 for \$2.10; 6 for \$4.00; 12 for \$7.50

**7253 Speciosum rubrum** (*Show Lily*) Beautiful white flowers suffused rose-pink and spotted crimson. The petals are gracefully reflexed. Blooms in August and September with four to ten flowers per stem; well established plants often have more. Grows 3 to 4 ft. tall. Universal favorite.

## HYBRIDS HELP YOU HAVE A

### BETTER GARDEN

A true first generation (F<sub>1</sub>) hybrid represents the offspring of parent plants carefully selected for desirable hereditary traits. Such hybrids, created and offered by Burpee, provide very desirable advantages to the gardener. An F<sub>1</sub> Hybrid may have one or more of the attributes obtainable through hybridization—the particular qualities of an individual hybrid are explained in our descriptions.

Generally, the value of hybrids is in their ability to yield more earlier and over a longer period of time, even under adverse conditions. A hybrid may also have a desirable quality never before seen, or a number of fine traits never before combined in one plant. Other values are greater uniformity of growth, maturity, and type of fruit; better germination, increased vigor and resistance to disease.

Each seed of an F<sub>1</sub> Hybrid is produced by carefully controlled crossing, usually by hand, of distinct parent lines. This requires much labor and heavy expense. However, the resulting seed is well worth its extra cost. We recommend especially our F<sub>1</sub> Hybrids, both flowers and vegetables.
